

Why is my school closing?

There is a contagious virus in our world that is making people sick. It is called COVID-19. Contagious means other people can get sick when around a person who has the virus. It is easier for the virus to spread when many people are close together in the same space.

Schools are closing to help people stay healthy. All schools in Saskatchewan will be closed. By staying home from school and washing your hands often, everyone will have a better chance at staying safe and healthy. You can talk to your parents about COVID-19 and staying healthy.

Doctors and scientists are working on a new medicine to help people who are sick and to keep people from getting sick. Schools will stay closed until it is safe. Doctors will decide when it is safe. We don't know how long it will take for schools to open again. Your parents will let you know when it is time to go back to school.
